

## Prerequisite to execute the Project

1. **Python:** The programming language used for building the application and scripting tasks.

Visit the URL [Download Python | Python.org](#) to download and install python in the PC.

We can get installation instructions from one of the websites by searching using the link [jupyter python download and installation instructions - Search](#)

2. **Dependent Python libraries / packages:** Install the following packages / libraries using pip or conda package manager.

pip install st\_btn\_select

Eg. pip install DateTime [to be typed in command window]

We can take help from this web URL [how to install python packages - Search](#)

- a. DateTime,
- b. Regex
- c. Streamlit
- d. Pandas
- e. numpy
- f. scikit-learn
- g. xgboost
- h. matplotlib
- i. seaborn
- j. joblib
- k. pickle
- l. surprise
- m. psutil
- n. time

--- End ---
